

## Senate Bill No. 1565

### CHAPTER 692

An act to add Section 25324 to the Public Resources Code, relating to energy conservation and development.

[Approved by Governor September 22, 2004. Filed with Secretary of State September 22, 2004.]

#### LEGISLATIVE COUNSEL'S DIGEST

SB 1565, Bowen. State Energy Resources Conservation and Development Commission: strategic plan.

Existing law requires the State Energy Resources Conservation and Development Commission to conduct biennial assessments and forecasts of all aspects of energy industry supply, production, transportation, delivery and distribution, demand, and prices. The commission is required to use these assessments and forecasts to develop energy policies that conserve resources, protect the environment, ensure energy reliability, enhance the state's economy, and protect public health and safety. The commission is required to adopt a biennial integrated energy policy by November 1 that contains an overview of major energy trends and issues facing the state.

This bill would require the commission to adopt a strategic plan for the state's electric transmission grid using existing resources. The bill would require that the plan identify and recommend actions required to implement investments needed to ensure reliability, relieve congestion, and to meet future growth in load and generation, including, but not limited to, renewable resources, energy efficiency, and other demand reduction measures. This bill would require the strategic plan to be included in the integrated energy policy report adopted on November 1, 2005.

*The people of the State of California do enact as follows:*

SECTION 1. Section 25324 is added to the Public Resources Code, to read:

25324. The commission, in consultation with the Public Utilities Commission, the California Independent System Operator, transmission owners, users, and consumers, shall adopt a strategic plan for the state's electric transmission grid using existing resources. The strategic plan shall identify and recommend actions required to implement investments needed to ensure reliability, relieve congestion,

and meet future growth in load and generation, including, but not limited to, renewable resources, energy efficiency, and other demand reduction measures. The plan shall be included in the integrated energy policy report adopted on November 1, 2005, pursuant to subdivision (a) of Section 25302.
